Business Description: Delivering the first truly easy way to buy, sell, and manage ALL major cryptocurrencies within a single, secure application.

Company Background: Javy leadership watched and waited, since 2012, for a comprehensive, easy solution to emerge. Since nothing viable yet exists, Javy seeks to deliver this missing piece for mass adoption.

Management: Brandon Elliott has decades of IT, infrastructure, & security experience with a focus on regulatory compliance. Frank Grogan has decades of similar expertise with a focus on HIPAA compliance. Kirubel Girma is an ex-Microsoft developer who has a keen ability to manage the design (UI/UX), blockchain, and software development teams.

Products/Services: We believe that mass adoption of cryptocurrency depends upon having a secure (not web-based), yet intuitive, cryptocurrency exchange that bridges the legacy banking system to crypto by incorporating quick and simple ID verification, fully decentralized exchange (arbitrage across decentralized exchanges and partner centralized exchanges), and supports all crypto user requirements in a single, feature-rich solution. This is the Javy crypto solution.

Technologies/Special Know-How: Javy eliminates the need for holding volatile cryptocurrency reserves by way of a patent pending process involving the Javy token (JVY). Further, the Javy team has the unique ability to identify and overcome the regulatory obstacles to establish necessary banking relationships, provide intuitive user interface, and add numerous, highly desirable features for crypto traders, including arbitrage controls, high frequency trades, low latency, tiered fee structure, and more.

Markets: Existing crypto-savvy consumers are the, \$50 billion per month transaction volume, low-hanging fruit. As Javy gains traction, mass adoption will expand the market exponentially. With the advantage of vetted trading infrastructure, Javy will serve the crypto markets in the same way as do online stock brokers, tapping into a potential trillion-dollar global market annually. Javy earns a small fee on every transaction, regardless of market ups and downs or which cryptos gain or lose.

Distribution Channels: Website plus promotion from each crypto, token, and STO/ICO that we support. As Javy makes it easy for its users, they will be inclined to announce integrations and push other consumers to our wallet & exchange platform.

Competition: There are numerous wallet competitors (Eidoo, TrustWallet, EdgeSecure, Exodus, Jaxx, etc.), but they each lack several key components of a comprehensive solution. Further, coming regulation in the US will see a mass migration away from US-based crypto wallets. Indirect competitors would be Coinbase, Gemini, Binance, etc. However, they all lack the security, decentralized exchange component, and app-based (mobile & desktop) infrastructure required for mass adoption.

Financial Projections (Unaudited):

	2019	2020	2021	2022	2023
Revenue	\$1,446,000	\$38,201,000	\$105,540,000	\$220,468,000	\$420,982,000
EBITDA
